

# NEXT GENERATION MONOLITHIC MEMBRANE

### THE NEW EXOPERM MONO 150 IS A MONOLITHIC HIGHLY BREATHABLE MEMBRANE.

It integrates 2 performance technologies - **Monolithic Technology** and Spunbond Technology - resulting in a unique 3-Ply sarking, roof underlay and wind barrier that offers high protection and long term durability for the building.

Breathable membranes offer different properties depending on the technology and materials used in the production process.

Our aim is to provide sustainable, highperformance long-lasting products that are reliable and offer safety to the builder and comfort to the homeowner.

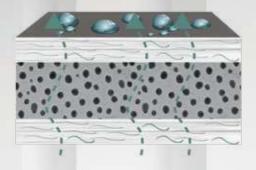

### MONOLITHIC

TPE Monolithic film guarantees

breathability, thanks to a non-physical,
absorption and diffusion reaction, rather
than a micro perforation process as seen
in microporous products. This means the
layer is continuous, dense and free
of pores, offering a complete long-term
barrier against the passage of water, while
achieving increased durability.

### **MICROPORUS**

Membrane with **Microporous layer.**Membranes using older microporous technology are more suspectable to UV damage, delamination, and ageing. The layer is stretched with calcium carbonate added during production which creates holes in the material. Their waterproof performance and claimed breathability can be easily affected during installation. This layer utilizes physical vapor transport pores which can easily be blocked.

# HIGHEST PROTECTION FOR A DURABLE BUILDING

Each layer of this **innovative highly breathable membrane** offers specific properties to help avoid structural damage of the building.

The technology used in creating each layer ensures a **stronger**, more **flexible membrane with greater resistance** to corrosion and abrasion compared to the conventional microporous membranes that are currently prevalent on the market.

## WHY PARTEL EXOPERM MONO 150?

- High resistance to penetration of water (W1)

- Excellent ageing resistance due to the Monolithic Technology
- Excellent weather resistance and good thermal stability (-40 °C to 80°C)

- Windtight, Highly diffusion open
- Optimal UV stability
- Helps to avoid structural damage

# THE TOP AND BOTTOM LAYER

2 layers made using the Spunbond Technology, resulting in 2 protective non-woven PP fabric layers with high mechanical resistance and good UV stability.

### MIDDLE LAYER

**EXOPERM MONO 150** membrane transports vapour to outside. The TPE functional layer located in the middle of the product, is vapor open whilst having excellent waterproofing properties. The **Monolithic TPE layer** creates a complete wind tight, waterproof membrane that expels any water/ humidity.

Its characteristics have been tested (requirements of EN 13859-1 / 2) and certified (CE mark).

**EXOPERM MONO 150** is available also with **integrated tapes on both sides**, ensuring optimum wind tightness and water proofing. Its integrated tapes use water resistant acrylic adhesives designed for a lifetime. The adhesive is environmentally friendly and is free from solvents, promising you a healthy construction.

WEIGHT	EN-1849-2	140 G/M²
MATERIAL		PP.TPE.PP.
SD- VALUE M	EN ISO 12572-C	0.07 M
REACTION TO FIRE	EN 13501-1	E
AIR TIGHTNESS (100 PA)	EN 12114	0.001 M³/M², H, PA
WATER RESISTANCE	EN 1928	W1 (BEFORE & AFTER AGEING)
TENSILE STRENGTH MD/CD	EN 12311-1	305/175 N / 50MM
ELONGATION MD/CD	EN 12311-1	65 % / 70 %
NAIL TEAR RESISTANCE MD / CD	EN 12310-1	155 N / 190 N
TEMPERATURE RESISTANCE		-40°C TO 80°C
CE LABELLING	EN 13859-1; EN 13859-2	AVAILABLE
UV RESISTANCE		3 MONTHS

#### **ONE PRODUCT - TWO APPLICATION TYPES**

**EXOPERM MONO 150** was developed with both commercial and residential applications in mind, for a wide variety of applications across diverse industries. It was designed to be used successfully for both **roof and external facade applications**.

This advantage offers builders and architects the freedom to use a single product with multiple benefits, ensuring efficiency during construction.

- Suitable for all insulation types

1.5M X 50M=75M<sup>2</sup> 59-1/16" X 164'-1/2" = 807 SF

3M X 50M=150M<sup>2</sup> 9' 10-1/3"" X 164'-1/2" = 1615 SF

#### **COMPLEMENTARY PRODUCTS**

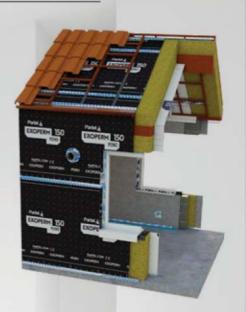

HIGH-PERFORMANCE AIRTIGHT AND WINDTIGHT TAPE

LIQUID ADHESIVE FOR AIRTIGHT CONNECTIONS
